Responsibilities include
.Gathering client requirements
.Developing solutions based on client needs
.Providing support for current clients
.Training clients on how to get the most out of our solutions
.Customizing apps based on specific client needs

SKILLS

Programming Languages: Javascript, Kotlin, Python
Libraries/Frameworks: ReactJs, NodeJs, React Native, Android
Tools / Platforms: AWS, VSCode, Digital Ocean, Heroku, Docker
Databases: MongoDB, PostgreSQL, Firebase

PROJECTS / OPEN-SOURCE

Syngeta PRP App | Link   *React Native, Realm*
In support of a performance-related pay system that the client had developed we created a react native application that allowed the users to capture timesheets for harvesters as well as record quality remarks for a harvester in order to calculate their performance-related pay at the end of the month.

RTS Jobcard App | Link
I developed a react native application that allowed technicians to enter data about the job they perform for a client and allow clients to add signatures to job card

Last Home app | Link
I developed a react native application that allowed users to find information about the burial location of their loved ones.

Mentor Sacco Website | Link
Worked as a front-end developer for Mentor Sacco, an online platform built on ReactJs that allows users to apply for Sacco services such as Loans ans Shares and track the progress of their applications.
